

Thinking of switching to Green Energy?

It is cheaper than you think, and if you join through Green TEA, we will be able to give more energy saving help to our community

Transition Eynsham Area (Green TEA) has set up a green energy scheme to help consumers, help the environment and help the community.

We have analysed green energy suppliers and have chosen Stroud-based Ecotricity** as a partner as we feel they offer the best mix of value, green credentials and benefits. Also they will be the first supplier to offer **green electricity AND green gas**. They invest 100% of your bill in clean forms of power like wind energy and are the only green electricity company actually building new renewable energy sources. In 2007 alone they invested £25 million in wind energy- an average of £450 per customer, per year. They will give Green TEA a donation if you switch, and will help us offer our community more help to save energy.

ecotricity

makes green gas from organic waste.

'The UK's first Green Gas tariff and the world's first true Eco Dual Fuel has arrived.'

Once you have signed up for electricity, you can register for green gas, which will be available later this year. They promise to price match British Gas dual fuel tariff.*

To switch: call free on 08000 302 302 and quote 'ETT1' or 'Transition Eynsham Area' or go to <http://www.ecotricity.co.uk/landing/?partner=ETT1>

we recommend 'New Energy Plus'

If you are an average electricity and gas user, this will save over 4 tonnes of CO2 per household per year. This is 57% of average household emissions and is equivalent to flying 43,000 km - more than flying to Sydney and back - or traveling 230,000 km on Eurostar and international rail- that's going from London to Nice and back 115 times! ++

* Based on 'New Energy' tariff-currently 46% renewable, all generated by Ecotricity; they promise to match the standard price of your regional supplier. The 100% renewable 'New Energy Plus' electricity tariff which we would recommend is only 0.5 pence extra per kilowatt hour.

** We have plenty of information on other Green energy suppliers. We encourage people to switch to one of these, but Ecotricity will help us achieve our aims by giving us an income.

++ Department of Energy and Climate Change Act on CO2 Calculator Version 2.0.

Transition Eynsham Area (TEA) is a local, grass-roots movement to cope with the twin threats of rising global temperature and falling oil supplies by making the Transition from an oil-dependent economy to one that uses only renewable energy and is therefore sustainable indefinitely.
